

PROJECT DATA SHEET **C16-01**

FLOOD CONTROL AND PREVENTION STUDY IN LIMPOPO RIVER BASIN

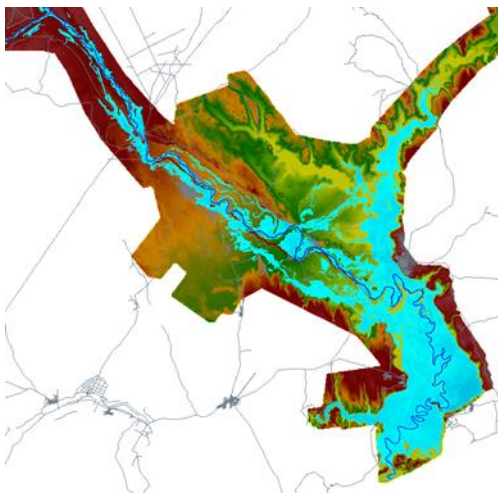

About the Project

The study aims to improve the understanding of Limpopo River hydrology, assess existing measures for flood prevention and mitigation, structural and non-structural, conduct a SWOT analysis, and prepare recommendations on how to improve the effectiveness of flood prevention and mitigation measures involving stakeholders.

The services provided by Consultec comprised the following activities:

- Collection and analysis of hydrological data;
- Detailed analysis of previous floods;
- Statistical studies;
- Operation with hydraulic model 1-D and 2-D+.
